Correction to Activation and Alteration of Base Selectivity by Metal Cations in the Functionality-Transfer Reaction for RNA Modification

Kazumitsu Onizuka, Yosuke Taniguchi, and Shigeki Sasaki*

Bioconjugate Chem. 2010, 21 (8), 1508-1512. DOI: 10.1021/bc100131j

Frratum:The graph of Figure 4 should be replaced by the graph shown below. Unfortunately, the same graph was

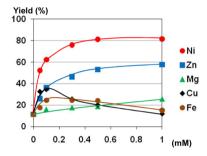

Figure 4. Concentration dependency of metal cation on the functionality transfer reaction. The transfer reactions were performed by using 15 μ M of S-functionalized ODN1F-G^S(Me, Ph) and 10 μ M of the target ORN2 (G) in 50 mM MES buffer containing 100 mM NaCl in the presence of 0–1 mM MCl₂ at pH 7.4 for 1 h, and followed by HPLC with monitoring UV at 254 nm.

used in Figure 4 and Figure 6, which was not recognized at the proof correction step. The caption and the text for Figure 4 do not need any correction.
